

Patent Claims

1. Communication unit with:

- a memory (10) for storing data of possible communication partners (2),
 - a connecting device (11) for establishing communication connections with a communication partner (2) using different means of communication,
 - a control unit (9) for triggering the connecting device (11)
 - in order to establish a communication connection by using data that is stored in the memory (10) and/or that can be entered manually,
- wherein,
if establishing the connection failed, the control unit (9) triggers the connecting device (11) in such a way that a communication connection is established using another means of communication.

2. Communication unit as claimed in claim 1

wherein

text messages can be stored in the memory (10) that can be forwarded with a suitable means of communication,

3. Communication unit as claimed in claim 1

wherein

the means of communication can be assigned priority levels.

4. Communication unit as claimed in claim 1

wherein

the selection of the means of communication can be influenced by way of user specifications.
